

Secure Data

for fire protection of data media

Ever thought about what would happen if you had a fire and lost all of your computer data? Statistics show that more than 80% of all companies that lose their computer data are out of business in three months. The answer is to protect your valuable data media with the Secure Data.

With the latest technology and high specification materials used, the Secure Data offers unique features. It is a single wall fire safe with only one door to open to reach your valuable data media. The Secure Data is more than 30% lighter than any other product available in the market place. Furthermore the newly developed construction offers 2 hour fire resistance in combination with a wall thickness of only 90 mm resulting in larger internal volume with minimised floor space.

Model

The Secure Data is available in five models ranging from 45 to 200 litres. The safe gives full access to the extensible shelves with the door open at an angle of only 90°. The door can be further opened up to a 125° angle maximum.

Locking

The Secure Data Range is equipped with a high security double bitted key lock or user friendly electronic pin-code lock as standard. This high security electronic lock can store 2 user codes (6 digits). Both are Class A, EN 1300 / ECB•S approved.

Certification

The Secure Data range is certified to 120 Diskette according to NT Fire 017. This means that your data media is protected even after being subjected to a fire lasting 2 hours. Due to the insulated walls and special seal system the internal temperature will not rise above 52°C.

Additional features

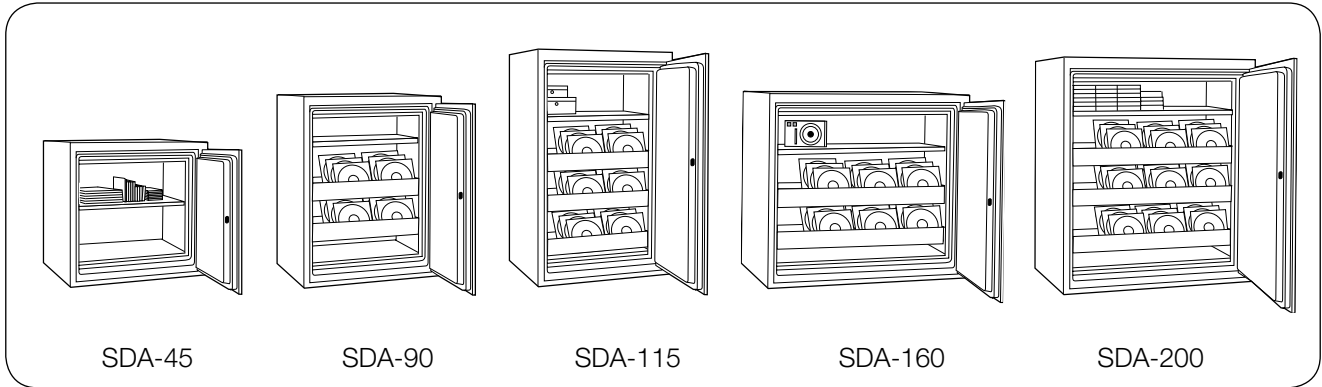

A slam action bolt work is used for easy and convenient closing and ensures full fire protection. This means you will not have to lock the door in order to be protected in a fire; just slam it! A multi-seal system provides water resistance as well as protection against moisture and gases. All models are equipped with a removable shelf or extensible drawers. The drawers come with adjustable dividers to organise your data media. The shelves and drawers can be placed in almost any position due to the sophisticated racking system.

Design

The Secure Data range will complement any user environment and is supplied in a modern in light grey finish. The electronic lock is finished in black with a chromium handle.
