### Body

The inner and outer bodies are constructed from high grade steel electrically welded together to form one solid unit with minimum thickness of 60mm. The space between the inner and outer body contains advanced anti-penetration materials.

### Door

The door is constructed with double steel walls containing a unique Anti Penetration material in total, forming a minimum of 100mm barrier of defensive strength.

### Boltwork

All sizes have 3 way moving espagnolette boltwork with 30mm bolts securing into the top and bottom door frame. In addition the hinge dog bolt at the rear give added strength and provide a clean cut, modern appearance disguising its strength.

### Locking

The entire locking area is covered by hardened manganese steel anti drill plates and a "live" anti explosive relocking device, which is permanently on guard to protect against even the most determined attack.
