

ROBUR

RSH Security Pedestals

- Secure drawer pedestals with deposit facility
- Time delay locking ideal for banking and service counters
- Protects staff, cash and coins
- Robust steel construction
- Wide range of styles and configurations
- More than 40,000 units installed worldwide

First developed over 30 years ago, Robur RSH Pedestals with Time Delay Lock have become one of the most popular security solutions for banks and other organisations. With more than 40,000 units installed in locations all around the world, you can be assured of high quality and the very best levels of protection.

All Robur RSH Security Pedestals share the same basic features, with a multi-drawer configuration that incorporates a deposit facility. Counter staff can quickly drop large denomination notes or other valuables into the lowest drawer, which is secured by a time delay lock. Staff cannot open this drawer until the preprogrammed time, protecting the contents from unauthorised access and theft.

The standard drawers can be used to hold coins, cash and other items which are needed close at hand. They are secured by key lock on RSH1000 and RSH1500 units. The RSH2000 features a unique digital lock that allows each drawer to have its own PIN code and/or time delay set.

The body and drawer partitions of every pedestal are constructed from cold-rolled steel and fully welded. Each unit is pre-drilled for base fixing if required. Drawers on higher-end RSH2000 models utilise a locking bolt at the rear in addition to the standard frontal mechanism.

The RSH1000 provides entry-level security with key locks securing its upper drawers.

Time delay units are labeled to dissuade any attempt to gain unauthorised access.

The RSH2000 also features a convenient pull-out stationery tray as standard. This is available as an optional upgrade on other models. A wide range of configurations and customisations are also possible, from drawer handles, deposit slots, inserts for sorting coins and cash, and more. Certain models can also be fitted with battery back-ups and can be connected to an emergency alarm system. RSH1000/1500 models are battery-operated, while RSH2000 units use mains power.

An ideal solution for any cash handling environment including banks, post offices and retail outlets.
