

HIGH SECURITY KEY FILING SYSTEMS

The ultimate tracking system.

Whether you need a simple key cabinet, a mechanised key control system or a sophisticated key issue and monitor system, our range of high quality storage cabinets help to maintain total accountability of large quantities of keys and help prevent unauthorised access within domestic, commercial and light industrial environments.

With a body constructed from 3mm steel, as used in the manufacture of cash safes and a 6mm steel slab door, the High Security cabinets provide unparalleled protection and are used extensively throughout the UK's prestige motor dealers, police stations and banks.

As standard the cabinets are secured with a three-way locking mechanism, shooting 20mm bolts and using a VdS approved lock, although you have the option of fitting a combination or electronic locking system. They also include adjustable hook bars, clever key tags as with the System cabinets and Vaults.

The High Security cabinets are also available in deeper models for the storage of bunches of keys.

Floor Standing Systems are larger capacity key cabinets and their key panels are on telescopic slides for easy access and storage.

System 100/HS

High Security 960
